
Hardman Johnston Large Cap Equity

2018 FOURTH QUARTER REPORT

**Hardman
Johnston**
Global Advisors

COMPOSITE PERFORMANCE (%) (period ending December 31, 2018)

	4th QTR	1 Year	3 Years	5 Years	10 Years	Inception
Large Cap Equity (gross of fees)	-14.21	-5.10	8.90	7.93	12.89	10.79
Large Cap Equity (net of fees)	-14.35	-5.65	8.28	7.31	12.24	10.37
S&P 500 Total Return Index	-13.52	-4.38	9.25	8.44	13.06	9.25

Performance is preliminary through December 31, 2018. Periods greater than one year are annualized. **Past performance does not guarantee future results.** Net performance reflects the deduction of advisory fees. Composite inception date: December 31, 1989.

KEY TAKEAWAYS

- US economy remains in a strong position but global growth concerns and trade dispute weigh on investor sentiment
- FOMC completes 2018 objective of four hikes to interest rate target but softens tone for 2019; indications from yield curve will be an increasing focus in 2019
- Despite concerns, consumer confidence is strong and potential trade agreements can brighten the outlook for US equities

MARKET REVIEW AND OUTLOOK

We usually start our commentary with what is going right in our world and then temper our natural optimism with a sober assessment of where we have concerns. Given the sharp pull back in global equities in the fourth quarter, we decided to flip the script and focus on the reasons for the pullback and how they may be resolved.

US equity markets peaked within a few days of the beginning of the fourth quarter. Even as US employment and economic growth moved forward, storm clouds were forming around a sharp economic slowdown in China and a less accommodative interest rate policy from the Federal Reserve. Despite strong denials from public figures, news had been emerging from China for most of the year about a drop in consumption, reduced investment, heavy debt burdens at both the consumer and local government levels, and increased disruptions stemming from what appeared to be an escalating trade war. China, whose growth we have learned to take for granted, was showing vulnerability. As the old saw goes, when China sneezes, Asia catches a cold. Sure enough, neighboring economies slowed, the prices of copper (having peaked in June), oil and other input commodities fell over the second half of the year. Investors naturally wondered what impact China would have on the large multinationals that make up much of the US market and increasingly rely on China and the rest of Asia to drive much of their growth. Apple's dramatic announcement of a large drop in Chinese demand is likely the strongest symptom of this contagion we have seen, and may prove to be the capitulation event that helps market participants reset their expectations.

In addition, the Federal Reserve's Open Market Committee raised its target for interest rates twice in the second half of the year but was starting to be perceived as out of step with a possible slowdown in the US economy. Rising rates had already contributed to a slowdown in the housing market as mortgages became less affordable, and the gap between short term rates and longer term interest rates, known as the yield curve, was narrowing, or flattening. When they flip most will tell you that a recession is imminent.

We do not argue that these are the only two factors affecting investor perceptions, but they can be mapped to other negative effects. For example, we have recently seen a tick down in business confidence, although it remains at strong

levels. Given the actual and potential effects of a changing global trade environment and the rising interest rates on business loans, we understand how that may inject some doubt into businesses' planning process.

However, all is not lost. The US economy remains in a remarkable position. US employment is high, yet labor force participation keeps increasing. Real wages are finally moving up, and while business confidence is ticking down, consumer confidence is improving. Fed Chairman Powell acknowledges that interest rates may need to hold steady for a while, as inflation appears to be calm, thanks to productivity increases. That in turn may help housing affordability and spur a positive reversal in that market. Business investment was strong in 2018 and may yet pick up again in 2019 if a bilateral agreement is reached with China and a new normal is achieved.

Most importantly, innovation continues at a remarkable pace. Not a day goes by where we do not read about a new application for artificial intelligence (AI), or a scientific breakthrough that can help the sick return to health. Thousands of the brightest minds are working on improving the environment with clever and sometimes breathtakingly simple ideas. Knowledge on all topics is spreading rapidly thanks to the new media that we are all still learning to use. All bode well for a bright future, and for the few insightful and nimble companies, excellent long term returns.

PERFORMANCE ATTRIBUTION

Preliminary data as of the quarter ending December 31, 2018. Source: FactSet, Hardman Johnston Global Advisors LLC®. **Past performance does not guarantee future results.** The data shown is of a representative portfolio for the Hardman Johnston Large Cap Equity strategy and is for informational purposes only. Exposure refers to the contribution of the active segment weights to the total relative return. Results are not indicative of future portfolio characteristics/returns. Actual results may vary for each client due to specific client guidelines and other factors. Portfolio holdings and/or allocations shown above are as of the date indicated and may not be representative of future investments. Future investments may or may not be profitable.

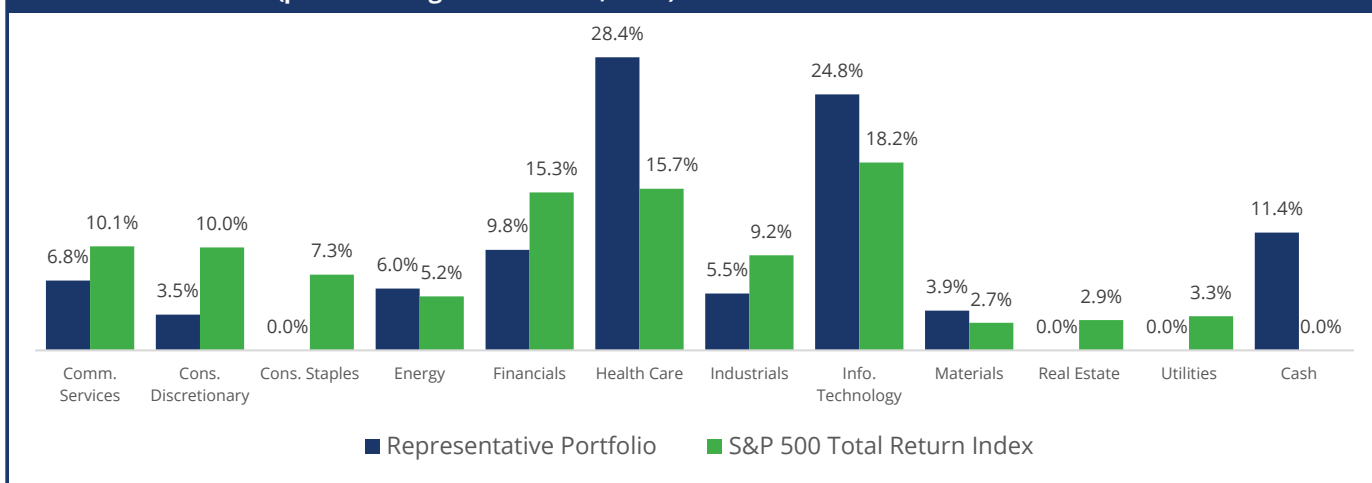

PORTFOLIO COMMENTARY

The Large Cap Equity composite contracted sharply in the fourth quarter, roughly in line with the S&P 500. While our US holdings outperformed and the international ADRs underperformed, overall performance was still generally weak and commensurate with broader equity indices. For the year, while the US holdings dampened the decline, the international holdings, primarily thanks to weakness in China, were a significant drag on relative performance. Our international investing focus is central at our firm, and our conviction that these stocks have a role in the portfolio is supported by both attractive valuations and excellent long term growth prospects.

Schlumberger, EOG, and FLIR were the largest contributors to the pullback in Q4. The first two companies fell in the quarter in sympathy with oil and natural gas prices. EOG is a producer, while Schlumberger focuses on helping its clients extract hydrocarbons more efficiently. Both are well positioned for any rebound. FLIR Systems also experienced a sharp pull back as the shift in control in the House of Representatives raised the specter of de-emphasis of defense spending.

While stocks in positive territory were precious few in Q4, HDFC Bank, ICICI Bank, and Varian Medical all eked out modest gains. The business environment in HDFC's and ICICI's home market of India is improving, and Varian shareholders received good news when important approvals for their latest radiation therapy machines came through.

PORTFOLIO EXPOSURE (period ending December 31, 2018)
